

Using Lifecycle BIM for Sustainable Operation & Maintenance

By making data driven decisions every day

Earth Yet Again Breaks Mark For Hottest Summer On Record

Unplanned plant outage, hot Alberta weather, line issue all contributed to Monday night's grid alert: AESO

“progress and growth are impossible if you always do things the way you’ve always done things”

Wayne Dyer

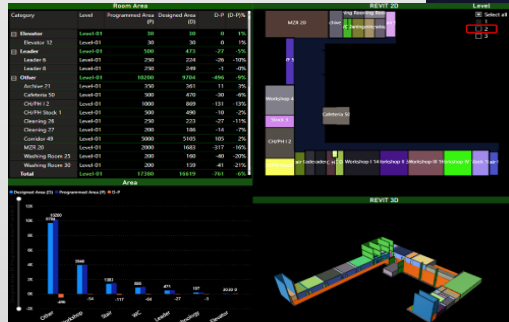

Around 100,000 jobs open in Alberta – but many companies can't find those with specific skills

Worker shortage is particularly felt in industries like energy, manufacturing and construction

Joel Dryden - CBC News - Posted: Jan 06, 2023 12:07 PM MST | Last Updated: January 6, 2023

Carbon taxes have the potential to act as a hugely powerful engine for change

Incident Reports

Combined Impact

- Overall savings: 15% to 35% in total operational costs for buildings and campuses when these technologies are implemented in synergy.
- Examples of Combined Savings:
 - Enhanced collaboration between teams leading to fewer design and construction errors.
 - Optimized lifecycle management from design through operation.

Industry-Specific Results:

- Healthcare: Up to 25% in operational savings due to streamlined maintenance and space management.
- Commercial Real Estate: Savings of 15% to 30%, especially in large corporate campuses due to energy-efficient smart building technologies.
- Education/University Campuses: Up to 20% reductions in facility management costs by using digital twins for maintenance and building performance optimization.

These technologies are showing promise in reducing costs, increasing efficiency, and improving overall building performance across various industries.
